

KEYSTONE K-LOK SERIES H

HIGH PERFORMANCE BUTTERFLY VALVES

Series H1 ASME Class 150 / 25 bar
Series H2 ASME Class 300 / 50 bar

GENERAL APPLICATIONS

- Airport refueling
- Hydrocarbon processing
- Chlorine
- Chemical processing
- Purified gas
- Steam and vacuum services
- Potable water
- Food processing
- Sour gas
- Oxygen
- Reverse osmosis
- HVAC
- Ammonia

TECHNICAL DATA

Size range:	DN 50 to DN 900 (NPS 2 to NPS 36)
Pressure rating:	Series H1 ASME 150, 25 bar Series H2 ASME 300, 50 bar
Temperature rating:	-40°C to 538°C (-20°F to 1000°F)
Vacuum rating:	1.016 x 10 ⁻³ mm Hg (4 x 10 ⁻⁵ in Hg)
Body style:	Lug and wafer
Lug bodies are fully rated for bidirectional dead end service	

FEATURES

- The Keystone K-LOK offers a high cycle life and a lower cost of ownership due to its unique seat designs which provides bi-directional, drop-tight shutoff in vacuum as well as at full rated differential pressure.
- Increased operator safety is provided by a standard blow-out proof shaft which meets the requirements of API 609.
- Flexibility is provided by a unique packing design which is suitable for both pressure and vacuum without modification or special assembly.
- Maintenance and down time is reduced due to an inverted packing gland bridge which allows for easy and full access to adjustment bolting without the removal of the actuator. Uneven packing adjustment is eliminated due to a 360 degree radius that is machined on the packing gland. This radius fits into an angle on the packing gland bridge resulting in a 360 degree even compression on the packing gland and packing.
- Positive shutoff and maximum seat life is achieved due to a cast in disc stop that perfectly aligns the disc into the seat.
- Positive and strong disc to shaft connection is achieved with the use of tangentially positioned wedge pins which are placed in a compression rather than shear, which eliminates the potential for failure.
- Reduced downtime and increased valve life is achieved by positioning the bearings close to the disc, providing maximum shaft support.
- Actuator mounting integrity is increased due to the ability to direct mount to the valve top plate without the use of brackets and couplings.
- Maintenance of packing is made easy due to an extended neck which allows for clearance of pipe insulation.
- All valves comply with Pressure Equipment Directive (PED), CE marking.

NOTES

1. Must be used with UHMWPE, fire-safe and metal seats.
2. May require de-rated pressure holding capabilities.
3. Other material available on request.
4. ** Determined by Valve ordering code (Uniqueness code).

TORQUE VALUES - METRIC

Seating and un-seating torque

Seating and un-seating torques are a function of the size of the valve and the shutoff pressure of the system.

Specific torque ratings can be found in the seating/un-seating table at the intersection of the 'size' row and the 'shutoff pressure' column.

All torques listed are for normal service conditions [i.e. operating frequency is a minimum of once per month; disc corrosion is expected to be mild or minor, the media is a clean gas, liquid or steam, and is non-abrasive and chemical effects upon the seat are minor].

For services that combine unfriendly conditions such as extreme temperatures and high solids, or corrosive with high temperatures, contact your sales representative.

HIGH PERFORMANCE BUTTERFLY VALVES

TORQUE VALUES - IMPERIAL

Seating and un-seating torque

Seating and un-seating torques are a function of the size of the valve and the shutoff pressure of the system.

Specific torque ratings can be found in the seating/un-seating table at the intersection of the 'size' row and the 'shutoff pressure' column.

All torques listed are for normal service conditions [i.e. operating frequency is a minimum of once per month; disc corrosion is expected to be mild or minor, the media is a clean gas, liquid or steam, and is non-abrasive and chemical effects upon the seat are minor].

For services that combine unfriendly conditions such as extreme temperatures and high solids, or corrosive with high temperatures, contact your sales representative.

NOTES

1. Surrounding air temperature is assumed to be 21°C (70°F). For every degree over 35°C (100°F) of the surrounding air, deduct 2 degrees from the maximum temperature ranges shown under the Pipeline fluid temperature column. (Example: 52°C (125°F) external temperature reduces maximum temperature values under the Pipeline fluid temperature column to 325, 410, 510, 600, etc.)
2. Valves may be insulated or uninsulated.
3. Brackets may be open rectangular tubes or the standard closed Keystone tubular shaft extensions.
4. All actuators have a maximum service temperature (outside atmosphere). These temperature limitations apply regardless of K-LOK extension lengths.

Note: C_v is the volume of water in US gpm that will pass through a valve with a pressure drop of 1 psi at 60°F

KEYSTONE K-LOK SERIES H
HIGH PERFORMANCE BUTTERFLY VALVES

H1W/H2W Dimensions

- ≥ DN 350 (H1W) ≤ DN 300 (H1W)
≥ DN 250 (H2W) ≤ DN 200 (H2W)

Valve shown is DN 250 wafer PN 25. Refer to pages 15-18 for wafer valve dimensions.

H1L/H2L Dimensions

- ≥ DN 350 (H1L) ≤ DN 300 (H1L)
≥ DN 250 (H2L) ≤ DN 200 (H2L)

Valve shown is DN 250 lugged Class 150. Refer to pages 19-22 for lug valve dimensions.

NOTES

1. Q dimension is the minimum allowable inside pipe diameter which provides API 609 specified clearance between the disc and pipe during operation. Dimension considers 1.6 mm (1/16") mating flange gasket offset on each end of the valve
2. For extensive drilling information see documentation.
3. Valve lay length [dimension 'E'] complies with applicable industry standard face-to-face dimensions when consideration is provided for tolerances provided by said standard.

NOTES

1. Q dimension is the minimum allowable inside pipe diameter which provides API 609 specified clearance between the disc and pipe during operation. Dimension considers 1.6 mm (1/16") mating flange gasket offset on each end of the valve
2. For extensive drilling information see documentation.
3. Valve lay length [dimension 'E'] complies with applicable industry standard face-to-face dimensions when consideration is provided for tolerances provided by said standard.

NOTES

1. Q dimension is the minimum allowable inside pipe diameter which provides API 609 specified clearance between the disc and pipe during operation. Dimension considers 1.6 mm (1/16") mating flange gasket offset on each end of the valve
2. For extensive drilling information see documentation.
3. Valve lay length [dimension 'E'] complies with applicable industry standard face-to-face dimensions when consideration is provided for tolerances provided by said standard.

NOTES

- Q dimension is the minimum allowable inside pipe diameter which provides API 609 specified clearance between the disc and pipe during operation. Dimension considers 1.6 mm (1/16") mating flange gasket offset on each end of the valve
- For extensive drilling information see documentation.
- Valve lay length (dimension 'E') complies with applicable industry standard face-to-face dimensions when consideration is provided for tolerances provided by said standard.

K-Lok Series H handle capacity

The maximum safe pull made by an operator is about 120 lbs. (54 kg). The effective length of the handle moment arm is 9¼" (235 mm) for the 10½" (267 mm) handle. This is due to the operator average hand width.

Listed below are the sizes of K-Lok Series H that can be operated safely with manual handles.

NOTES

1. All lug body valves have bolted seat retainers for full rated bi-directional dead end service.
2. Must be used with UHMWPE, fire-safe and metal seats.
3. May require de-rated pressure holding capabilities.
4. Standard seat retainer ring gasket is graphitic. Fiber is supplied for special applications.
5. Other material available on request.
6. Available in NPS 2 to 12 (DN 50 to 300) ASME 150/25 bar only.
